

We love to think and blend styles and functionalities, while being focused on sustainability, re-using materials, ideas and concepts. The products, partnerships and collaborations are always aiming to showcase unique, well-designed products and services that are practical, timeless and sustainable.

REVAMP creative process outcome are unique objects or series of items. Everything we produce is handcrafted. Materials such as wood, copper metal and low-VOC finishes are re-used to achieve the lowest footprint possible. Therefore, each piece is always absolutely unique.

We purposely make the piece with possible imperfections in mind. We believe scuffs and scratches enhance the look of every piece's result. We clean and sand the materials from remains of cement and dirt, but signs of previous painting, oxide or traces of existing nails may remain.

THE MEMORY OF THE MATERIAL
IS NEVER TOTALLY ERASED.
YET IT IS BROUGHT TO A NEW LIFE

TO ORDER

To order, or to discuss a project, please send us an email or give us a call.

SUSTAINABILITY AND SCAFFOLDING WOOD

AFTER A 5 YEARS USE FOR CONSTRUCTION, THE SCAFFOLDING WOOD BECOMES FURNITURE, PANELLING WALLS, FLOORS AND CEILINGS.

We work to reduce our impact at every level of our practice. This practice makes a big difference in the creative thinking, in the materials we choose, in the production processes and through our supply chain.

An example: Scaffolding wood trees grow very fast, so the use of this wood contributes to avoiding deforestation. Products made with this wood are considered "green" around the world for this reason. Besides the fact it is a recycled material. Used scaffolding wood brings different low footprints and every item has its own different "birth" marks.

It is a type of hard pine, with a long fibre, that gives elasticity and makes it resistant to temperature changes and harsh weather conditions.

SCAFFOLDING WOOD CAN BE USED FOR BOTH OUTDOOR AND INDOOR FURNITURE.

Scaffolding wood has this rough appearance and a grey color for being outdoors for a long time. This wood is difficult to work, because it has different thicknesses, but it is precisely these inequalities that make it authentic. It is very convenient for outdoor use because it is resistant to downpours and does not rot, unless you leave it stacked. These boards have gone through all kinds of weather. So no extra treatment is required.
